

MV NETWORK UPDATE JANUARY 2017

When it comes to securing electricity supply through New Zealand's overhead power lines, the humble porcelain insulator has proved to be the most reliable means of protection for many generations.

Manufactured in Temuka, South Canterbury by New Zealand Insulators (NZI), the quality of the local product is the result of years of manufacturing expertise built up by the company and the unique Kakahu blend of clays, sands and mixing agents. These come direct from our owned and operated mines, and all NZI branded porcelain insulators are made from this.

All NZI insulators are manufactured with a glaze that helps to prevent flash-overs by promoting self-cleaning and also enhances mechanical strength. All MV insulators are supplied standard with the addition of Radio Silent glaze to assist the reduction in radio interference.

NZI has built a reputation for reliability and durability since 1924.

NEW ZEALAND INSULATORS UPDATED 2017 CATALOGUE

- > New products
- > Updated and increased range
- > A5, 110 page MV & LV catalogue

NZI continues to re-invest in the Temuka factory, with a focus on ISO9001-certified quality manufacturing systems and expanded product ranges now distributed by NZI from manufacturers around the world. Staff numbers continue to increase year on year as we prioritise making customers the focus of our business.

The wisdom of choosing performance over price is supported by international research which shows that the price of porcelain insulators is typically only three percent of the cost of installing a new overhead line. However 90 percent of the faults likely to occur on that line will be caused by insulator failure. The only way to minimise risk and cost is to ensure you use insulators with the highest quality manufacturing practices and the highest quality glazing. NZI provides this manufacturing surety and more by offering a 25-year warranty on NZI manufactured porcelain.

New Zealand Insulators proudly made in Temuka, South Canterbury, New Zealand.
